The track is located in the "Borgo Valbelluna" sports facilities area between the Lentiai sports field and the SP1 provincial road. The facility is a combination of innovation and technology, but also a wealth of experience accumulated over many years of previous management, including numerous races and events, always managed to the highest level. Our circuit extends for 339 linear meters with a series of very fast curves and two main straights. Each curb has been designed to avoid damaging the models, with a minimum inclination of 2 cm from the road surface. The entire outer surface is made of 2.5 cm synthetic grass to slow the models in the event of an exit from the track, while the inner surface is made of 1.6 cm synthetic grass to allow the models to return to the lane on their own. The bumpers are made of 44 kg density neoprene covered with PVC with Velcro for a uniform connection; they also act as bumpers to minimize the risk of damage to the model. The Mycandy Arena meets all the needs of professional and amateur drivers, with a 24/7 timing system, two tire-turning benches complete with blowers, two large wash basins, and a covered pit area complete with electric tables. The refreshment area is spacious and offers the option of a break between sessions, complete with accessible restrooms. For this eventuality, we have also thought about supporting drivers with these disabilities by equipping the driving platform with a stairlift, giving everyone the opportunity to enjoy this magnificent passion of ours.

TRACK

Each curb has been designed to prevent damage to models with a minimum inclination of 2 cm from the road surface. The entire outer surface is made of 2.5 cm long synthetic grass to slow down the models in the event of an exit from the path, while the inner surface is made of 1.6 cm long synthetic grass to allow the models to return to the lane independently. The bumpers are made of 44 kg density neoprene covered with PVC with Velcro for a uniform connection. They also act as bumpers to minimize the risk of breakage of the model. Internal cut-resistant brakes prevent damage to the model.

TRACK

suitable for 1/10 - 1/8 on-road car

- Length 339 m
- Minimum width 5 m
- MyLaps time keeping with 2 independent loops
- Full audio coverage with 10+ speakers
- 4 portable microphones
- 6 large LCD screen for live results
- 4x3m Led Wall fully customizable
- Race control room with 3 stations
- Technical inspection room

STAGE

suitable for 12 pilots, race director and camera station

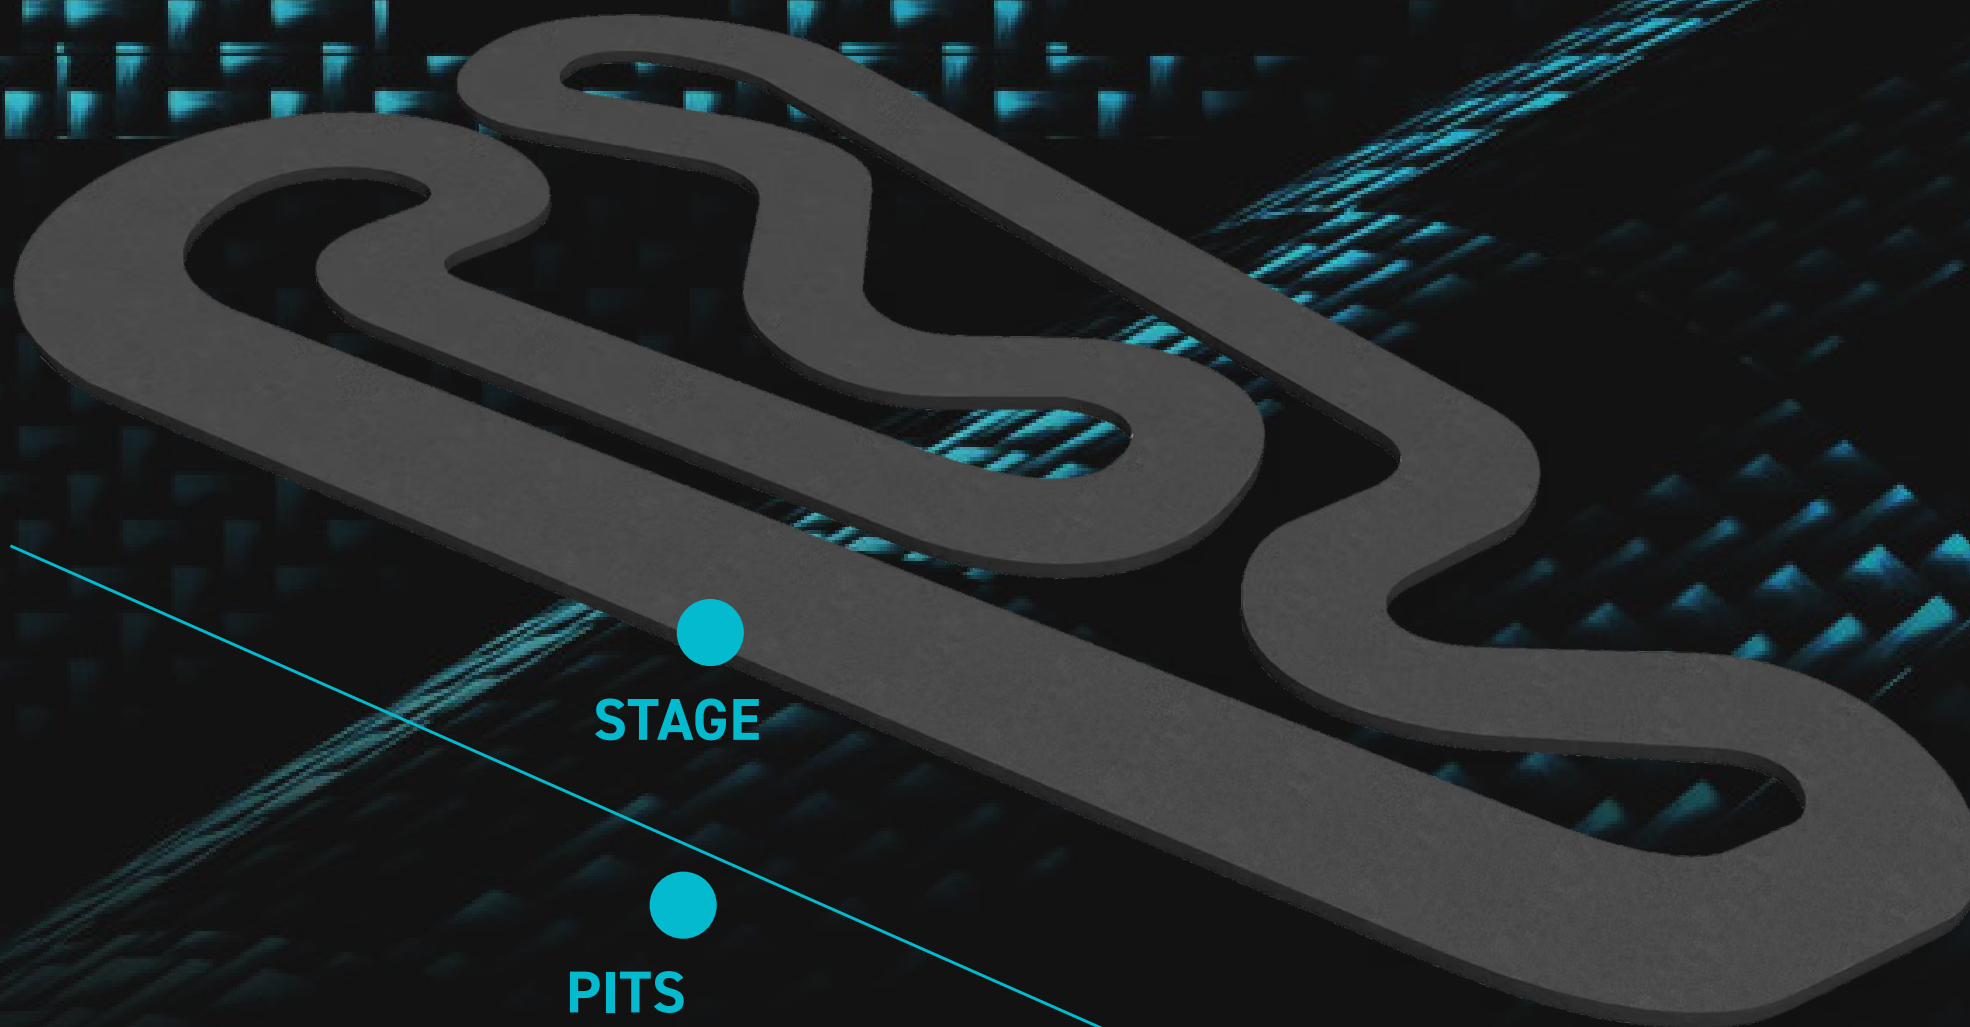

- Height from the ground 3m
- Length 16m
- Width 2,5m

PIT AREA

covered pit area for 128 drivers expandable to 250

- 16+ organized working table with electricity
- 4 air blowing station
- 2 washing stations
- 12+ tyre truer stations (12v powered)

TRACK

STAGE

PITS

PARKING

large parking lot for pilots and visitors

- direct acces for emergency veicles
- 30+ reserved staff parking
- 50+ private parking
- 400+ public parking

RV AREA

equiped area with DC and water

- 40+ private slot
- 50+ public slot

MYCANDY AREA

Purpose-designed and built facility

- Fully secured by cameras and an alarm system
- Full organizable public plaza with awards stage
- Private bar and catering
- Chill out zone
- Washroom & shower facilities

EQUIPMENT

A lot of stuff to keep everything at its best

- A collection of power tools
 - Green equipment
 - Track cleaning & preparation
- and more..
